STUDENT NAME: AHMAD EMIR ERFAN BIN MOHD ZUBRI

SUPERVISOR: EN. MUHAMMAD HAMIZ BIN MOHD RADZI

PRODUCT NAME: CENTRALIZED WEB-BASED SYSTEM FOR STRESS INDUCTION METHODS

SIGNATURE:

LEAN CANVAS MODEL

PROBLEM

- Stress induction methods are fragmented across multiple tools
- Researchers must switch platforms during experiments
- Data collection is manual and inconsistent

EXISTING ALTERNATIVES

- E-Prime (Stroop)
- Presentation slides (TSST)
- Manual stopwatch & recording

SOLUTION

- Integrate Stroop Test, Montreal Imaging Stress Task, Trier Social Stress Test Arithmetic Task
- Provide automated reaction time & accuracy tracking. Centralized data storage and real-time feedback.

KEY METRICS

- Number of test sessions conducted
- Accuracy & reaction time recorded
- System usage (active users)
- Data reliability (reduced manual errors)

UNIQUE VALUE PROPOSITION

- All tests in one system
- Automated data recording
- Consistent experimental environment

HIGH-LEVEL CONCEPT

- All-in-one platform for psychological stress experiments

UNFAIR ADVANTAGE

- Integration of multiple standardized stress tests in ONE system
- Automated synchronized data + behavioral recording
- Eliminates fragmented platforms problem highlighted in literature

CHANNELS

- University research labs
- Academic publications / thesis sharing
- Lecturer / supervisor recommendations
- Online academic platforms

CUSTOMER SEGMENTS

- Psychological researchers
- University students (research purposes)
- Clinical psychologists
- Research institutions

EARLY ADOPTERS

- Researchers currently using multiple tools manually
- Students doing psychology experiments
- Labs needing efficient data collection

COST STRUCTURE

- Development (PHP + MariaDB)
- Hosting & server costs
- Maintenance & updates
- Testing & validation

REVENUE STREAM

- Free academic use
- Future:

1. Subscription for institutions
2. Licensing for research labs
